
Heatmaps: one shared truncated-Blues ramp (light=little mass, dark navy=concentrated), PowerNorm(gamma=0.6), each row's scale fixed to the true row's own range; FB negative entries (min ≈ -0.001) clipped to 0 for display; door maps use Density seed 0. Gap panel: FB is deterministic (rank-d SVD, single line); Density is the mean over 5 seeds with a shaded 95% CI (t-interval (95%, scipy, df=4)). Colors: true = blue, FB = orange, Density = green.
